

Time Tailor Remote Control

The Time Tailor Remote Control provides complete monitoring and control of the Time Tailor.

This light weight 2U rack-mountable unit duplicates all the controls and the display panel that are found on the main Time Tailor unit. Remote access to individual parameters can be configured on the Time Tailor to allow for changing the parameter, or simply monitoring the current value.

The 9-wire RS-422 interface (SONY pin-out) allows for distances over 1000 feet when using high quality cables. 110 VAC required.

SPECIFICATIONS

Interface
